

## WHAT IS A SMART CONTRACT?

A smart contract is a special type of instructions stored on the blockchain. And it also can self-execute actions according to a series of parameters already programmed. All this in an immutable, transparent and completely secure way.

## WHAT IS TRON FLOW?

Tron Flow is a shared capital distribution platform, managed automatically, securely and transparently through a verified smart contract within the Tron blockchain.

No one can ever modify it or make it disappear.

# HOW IT WORKS

## EARN 200% OF YOUR ACTIVE DEPOSITS!

By means of a minimum contribution of 50trx, the system will generate dividends of up to 5% daily in relation to the active deposit you have every second.

For example: If you have 1000trx of active deposit and actual ROI is 3%. It means you will generate 30trx/day...and it will do that until you reach 200% of your active deposit.

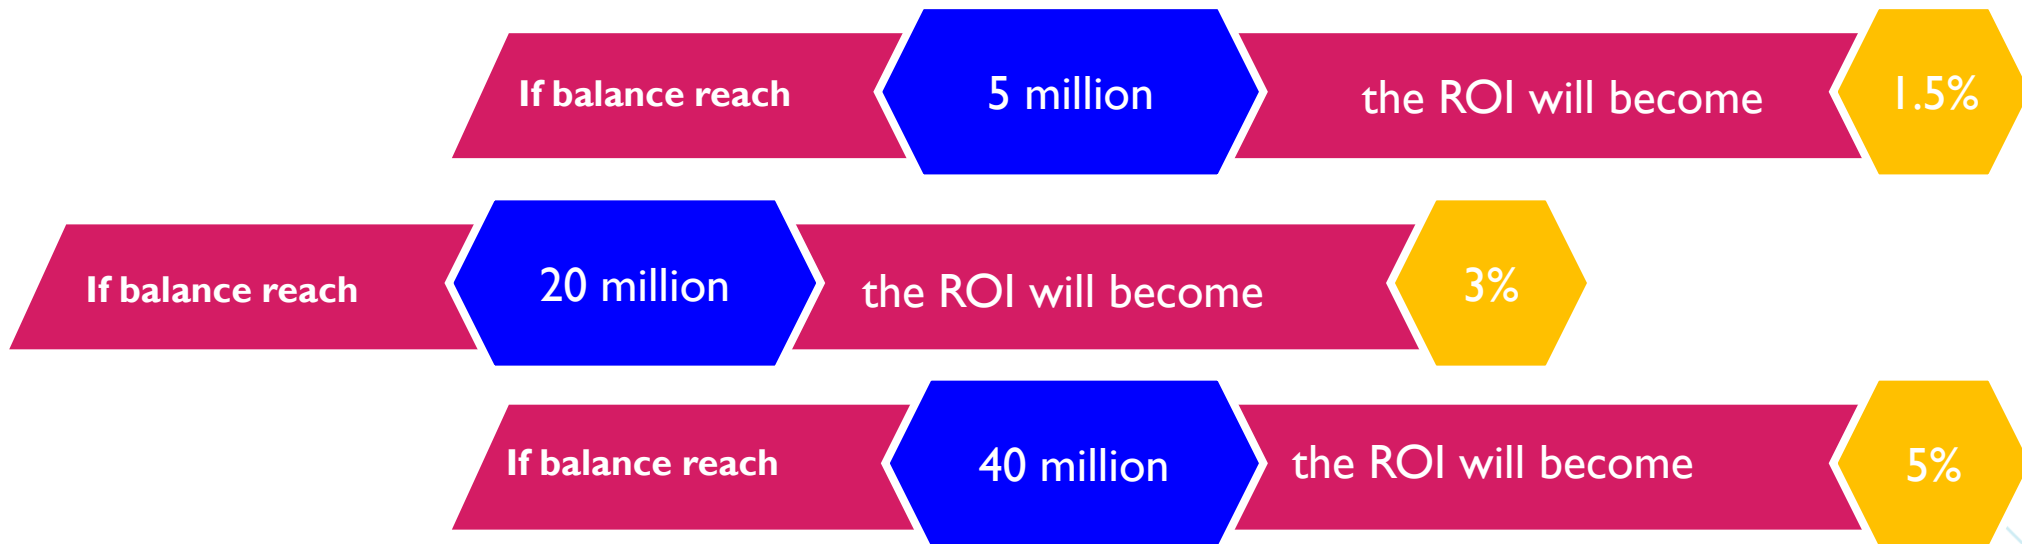

You can always decide whether to withdraw or reinvest the generated dividends, but it will consume active deposit in proportion. (Check How it works active deposit).

In the case of withdrawing 25% it will be reinvested in your active deposit and the remaining 75% will be sent to your wallet.

# HOW IT WORKS ROI

Tron Flow starts from a 1% ROI daily basis.  
For every 1.000.000 trx in the smart contract balance, ROI will increase by 0.1% up to a maximum of 5%.

Keep in mind that just as ROI can go up, it can also go down.  
The 5% ROI max limit will certainly help the sustainability of the system.  
With this formula we ensure that TRON FLOW will generate profit for a long time.

# HOW IT WORKS ACTIVE DEPOSIT

The system will generate profits up to 200% of the active deposit. Every 1 trx in the active deposit will generate 2 trx of profit. In other words, active deposit are directly related to the interest generated.

For this reason, each time you reinvest or withdraw your available interest, the active deposit amount that have generated that interest will be subtracted in proportion.

Tron Flow allows you to withdraw at any time, but without a doubt the system will reward those who keep or reinvest.

This operation will boost the sustainability of the system and avoid compulsive withdrawal behaviors by investors, thus avoiding drastic balance falls.

SEE EXAMPLES BELOW

# HOW IT WORKS ACTIVE DEPOSIT

## WITHDRAW EXAMPLE

The ROI for the example will be 5%.

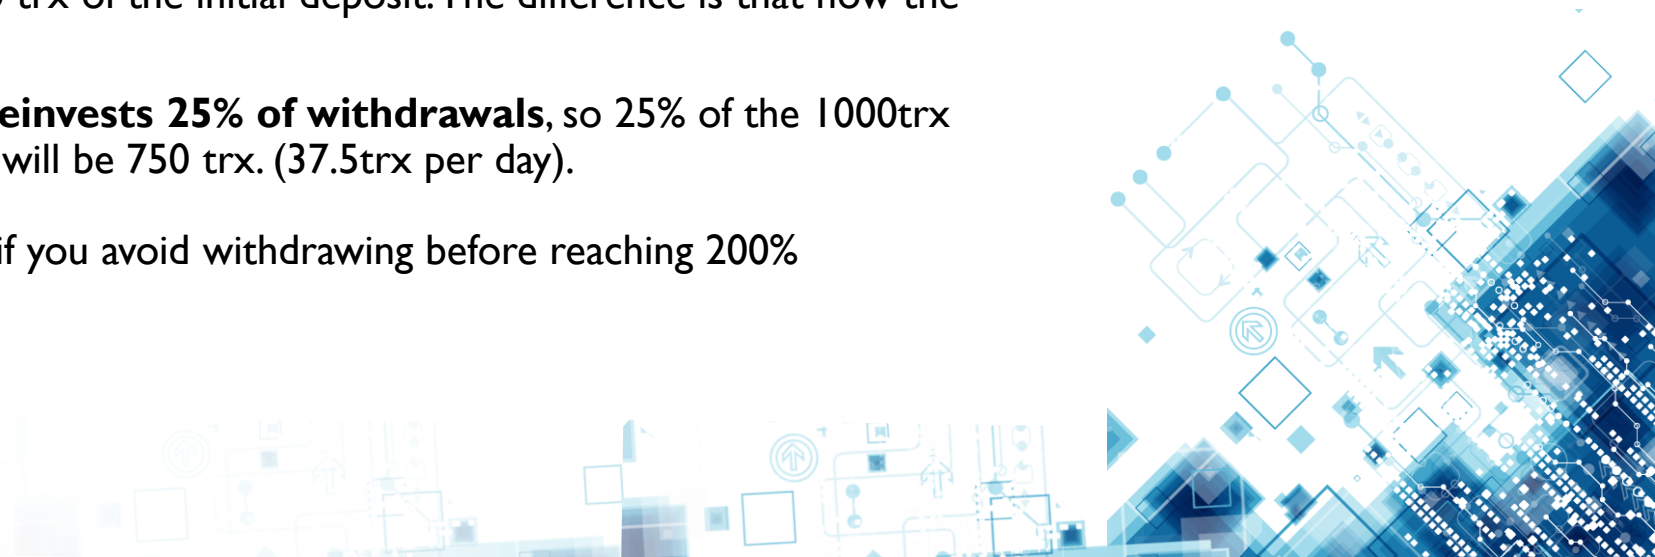

We have an active deposit of 1000 trx, which will end up generating 2000 trx. At 5% ROI, interest of 50 trx is generated per day.

If you decide to withdraw when the interest generated is 1000 trx, the following will happen:

The system will **subtract** 500 trx from the active deposits (the proportional part of the withdrawal that has already generated the yield). There will be 500 trx left in the active deposit that will end up generating the remaining 1000 trx of the initial deposit. The difference is that now the daily performance will be 25trx per day.

Let's not forget that the system actually **reinvests 25% of withdrawals**, so 25% of the 1000trx (250trx) will be added. So active deposits will be 750 trx. (37.5trx per day).

The **OPTIMAL** return will be achieved if you avoid withdrawing before reaching 200% profitability.

# HOW IT WORKS ACTIVE DEPOSIT

## REINVEST EXAMPLE

The ROI for the example will be 5%.

We have an active deposit of 1000 trx, which will end up generating 2000 trx. At 5% ROI, interest of 50 trx is generated per day.

If you decide to reinvest when the interest generated is 1000 trx, the following will happen:

The system will **subtract** 500 trx from the active deposits (the proportional part of the reinvestment that has already generated the yield). There will be 500 trx left in the active deposit that will end up generating the remaining 1000 trx of the initial deposit.

The 1000 trx will then be reinvested, thus leaving a total of 1500 trx in active deposits. From that moment you will generate daily interest of 75 trx per day, up to a total of 3000 trx.

Let's not forget that **you have already generated** 1000 trx, which added to the 3000 trx that remain to be generated add up to a total of 4000 trx. (Yield of the 1000trx of the initial deposit plus the 1000 trx reinvested).

With the **REINVESTMENT** we achieve a greater speed and a greater final profit.

# REFERRAL PROGRAM

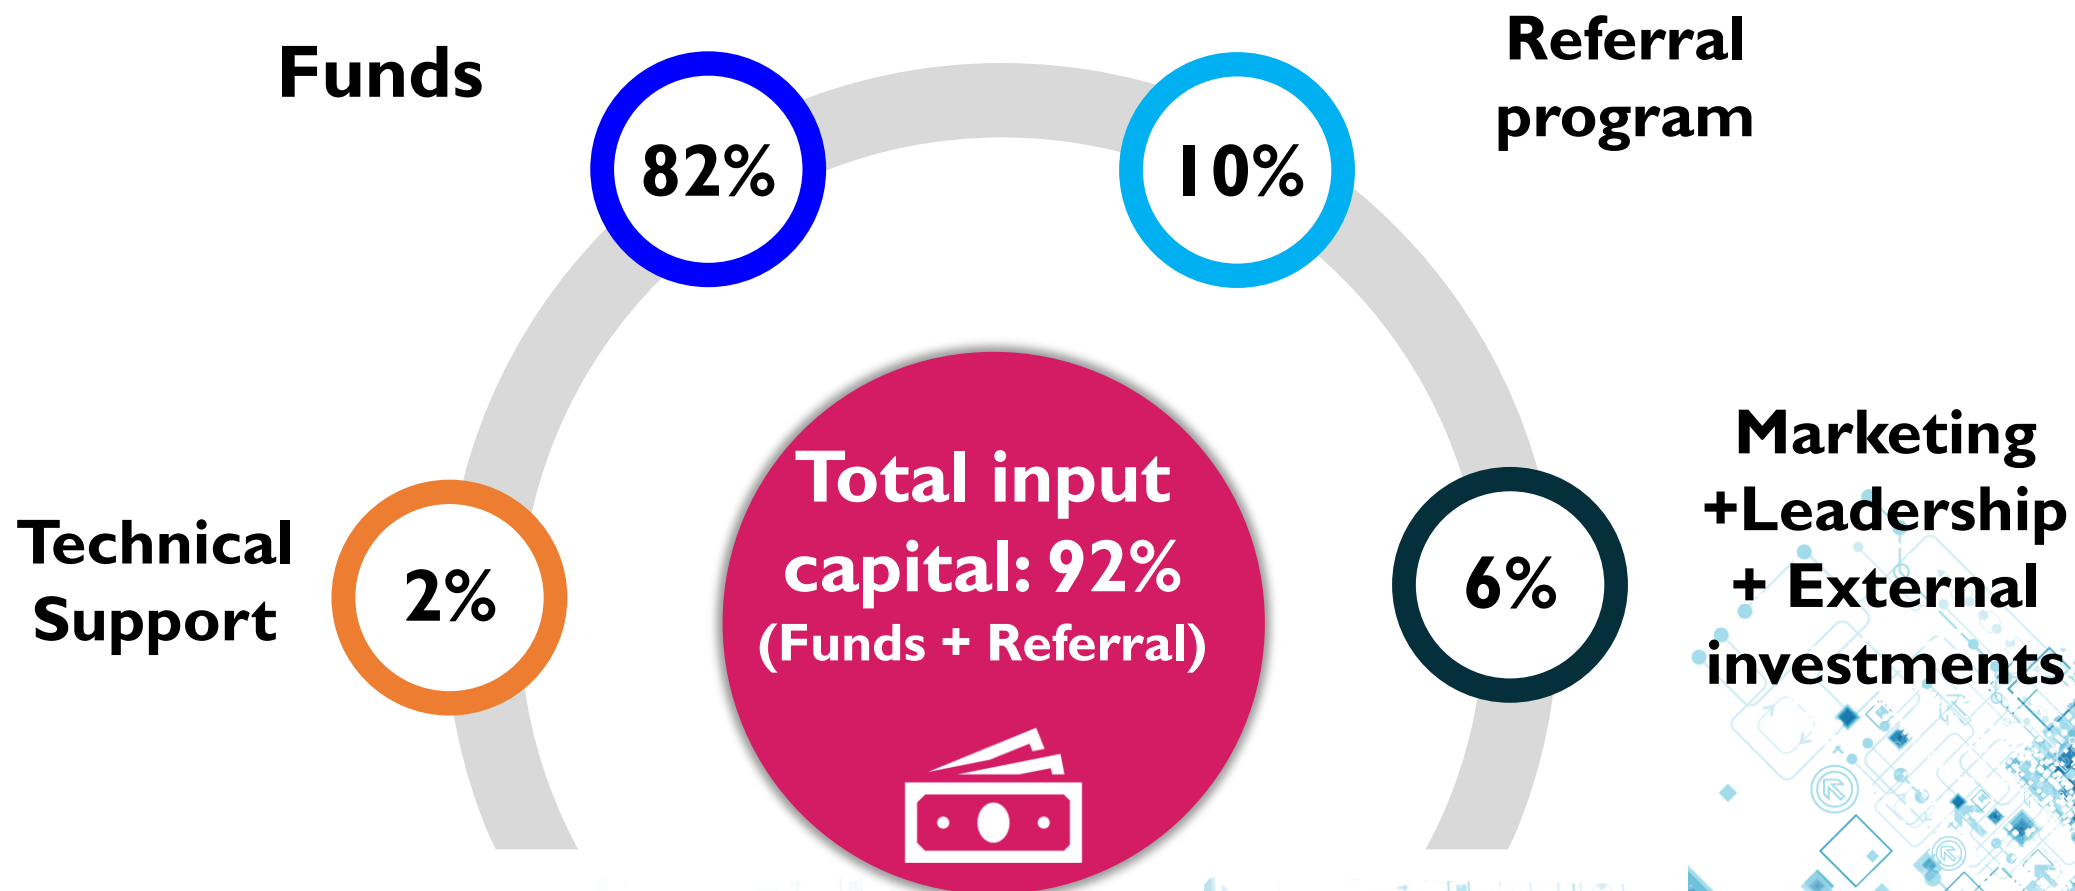

Tron Flow has 4 levels of referral commissions.

Referral commissions will increase your total active deposit for more daily profit and to help system's sustainability.

# TOTAL CAPITAL DISTRIBUTION

# SECURITY AND SUSTAINABILITY

- Verified and Audited Smart Contract, without back doors.
- Smart active deposit.
- Variable ROI until 5%.
- Earnings limited to 200% of your active deposit.
- Referral commissions do not leave the system. They are added to your active deposit.
- When making a withdrawal, 25% is reinvested returning to the system and thus increasing your active deposit.

## HOW TO GET STARTED WITH A COMPUTER

You can install the TRONLINK chrome extension.

Once installed, you can create a new Tron wallet or import an existing one and transfer the desired amount of TRX.

Finally, go to the Tron Flow website and invest a minimum of 50trx.

## HOW TO GET STARTED WITH A MOBILE PHONE

You can download the TRONWALLET application on your IOS or Android device from the APP store.

Once installed, you can create a new Tron wallet or import an existing one and transfer the desired amount of TRX.

Finally, access the Tron Flow website through the internal browser of the application and invest a minimum of 50TRX.

# THANK YOU!
